

what3words

The location app for all (emergency) situations

KNOWLEDGE

In Vorarlberg the rescue and fire brigade control centre uses this location system to be able to respond immediately to the emergency call 144 in case of need.

what3words is the simplest way to describe places worldwide with pinpoint accuracy. The system has divided the world into 3x3m squares and assigned each of these squares a unique three-word address.

The **what3words app** can be downloaded free of charge from any app store. The only requirement is the activation of the „Location“ function on the users smartphone. The app can now locate the current location and defines it with the three crucial words. The system also works offline. The accuracy of the location depends on the mobile phone and reception quality.
